# NetworkSoftwareSolutions

## Commercial offer

On-premise secured corporate system for exchanging instant messages, documents, voice/video calls in a company network

Since 2004

# Commercial offer

- ✓ A private server stores all encrypted data inside a company. All messages and user actions are under control. The program can work without the internet connection.
- ✓ MyChat is easy to get used to due to its simple design and similarity with popular messengers.
- ✓ You save money on phone calls and reduce the load on the phone lines. Video calls and voice conferences are provided too.
- ✓ Reliable bulk messaging with read receipts for a company's employees.
- ✓ Quick deployment in large networks. Integration c Active Directory, MSI packages, transparent authorization in domains; the program supports over 1,000 simultaneous connections.
- ✓ Messages, documents, and calls are encrypted.
- ✓ MyChat perfectly works in slow and complex networks, over the internet, VPN. A client-server architecture.
- ✓ Ready integrations with Asterisk, phpBB, Telegram, VNC, Radmin, REST, Python, C#, Delphi, Java, etc.
- ✓ Project management. Kanban board that works in a browser.
- ✓ Personal internal forum that works in a browser.
- ✓ Available on all platforms: Windows, Android, iOS, Linux, macOS, and WEB.

### **Secured communication**

Encrypted messages both in LAN and over the internet.

### **Instant messages**

Private messaging in real time. Text, images, documents, links, and many more.

### **Shared contact list**

All your teammates are divided into departments in the one tree-like list that repeats your company structure.

### **Multi-user conferences**

Convenient tool for group discussions of work agenda.

### **Bulk notifications (broadcasts)**

Reliable tool for bulk messaging with read receipts.

### **Announcements**

Important messages for all employees.

### **Logging**

All events and messages are stored on the server. Logs are managed by your security team.

### **Integration with Active Directory**

Import users and company structure. Quick MSI deployment via GPO, and transparent authorization in corporate domain networks.

### **Personal message history**

Stored as encrypted and available for personal viewing (via the browser too).

### **Exchange files and folders over the network**

Convenient and simple documents exchange of any size at high speed. No need to set up anything additional. Integration with Explorer.

### **Personal and shared file storages**

Store your documents in one place conveniently and reliably with the built-in FTP server.

### **Integration with existing systems**

Extended set of tools for MyChat to work with ready software: Asterisk, phpBB, REST, Java, Python, C#. There is also a scripting engine and a system of plugins.

### **Kanban project management**

Estimate the project readiness, assign task performers, and control stages from any device.

### **Internal forum**

Publish documents, guides — any structured information. Works in any browser. Notifications about any changes are sent to a chat.

### **MyChat Guest**

Invite customers and partners to a chat. MyChat Guest does not require installation and allows voice and video calls without registration.

### **MyChat Distrib Maker**

Create own MyChat Client distributive file with ready parameters, a set of plugins, and your server address.

## How much does it cost?

One concurrent connection costs 8 USD. One year of updates is included in the license price. MyChat Guest, and Distrib Maker are purchased separately.

## How to purchase?

Visa/MasterCard or cryptocurrency — whatever is more convenient for you.

The order takes a few minutes: <https://nsoft-s.com/en/buymychat.html>

## Do I have to pay for the program updates?

Registered users get all updates for free for 1 year after the purchase. When this period ends, you need to purchase a subscription for updates at a special discounted price for registered users.
